

Levamed active

Ankle support with stabilisation strap system

Indications

- joint sprain with overstretch of the capsule
- chronic ligamentous instability with recurrent supination traumas (twisting of the foot)
- in the second phase of treatment for deltoid ligament injuries
- acute or chronic post-traumatic or postoperative irritation of the talocrural and subtalar joints
- conservative treatment of injuries of the syndesmosis not requiring surgery
- follow-up treatment of fractures not requiring a cast

Mode of action

- additional hold and stabilisation „protection“ against twisting (supination)
- massage effect by the integrated silicone pads
- reduction of swelling (oedemas, haematomas)
- proprioceptive compression
- guidance and stabilisation of the joints

Product benefits

Individually adjustable and removable strap system with elastic and inelastic sections.

Strap can be individually shortened.
