

M.step®

Functional ankle brace with
foam-gel-padding

Indications

- conservative and post-operative care of fibular ligament ankle injuries (grades II to III)
- chronic instabilities of the ankle
- after distorsions

Mode of action

- rigid shells provide very good stabilisation in pronation and supination movements
- the foam-gel of the padding adapts perfectly to the varying anatomic conditions and provides a uniform compression

Product benefits

Only two straps allow a quick and secure fastening; straps can be taken off the shells and individually fixed.

Three length versions available: standard (long version), athletic (short version), kidz (childrens version).

Very light foamgelpadding with soft, skin friendly surface.

black

medi Kidz –
also available
as Kidz-Version.
