**D** Care electronics with intelligent cycle and operating data counter. Soft start/stop function, emergency operation for hoisting and lowering.

**Accessories (optional):** The rotatable handle bar for gait training in combination with the Walksupport.

# ProLift A 222

## The lightweight aluminium hoist for hospital care

The lightweight aluminum hoist **ProLift A 222** is the perfect hoist for hospital care. With a tare weight of only 40.5 kg, the ProLift A 222 features a hoisting capacity of up to 220 kg. The hoist features the same strong hoisting motor L34 as the A 166. In addition, it has a second motor for spreading of the chassis.

Due to its standard „care electronics“, the battery is generally equipped with a quick-change system. Furthermore, the electronic system allows operating the hoist with two different speed variations.

Further features such as the quick-change system at the sling bar, closed wheels and two-piece detachability, the ProLift A 222 shares with its two „brothers“.
