

## Lateral Transfer Slide

The Lateral Transfer Slide has a smooth surface and non-slip base allowing a patient to be moved from one surface to another without the need to be lifted. Used in conjunction with the Transfer Sheet, correct posture during the transfer is maintained. The Lateral Transfer Slide has tapered edges to allow for easy insertion and removal.

## Transfer Sheet

A full body-length sheet with six long handholds which can be used with the Maxi Mover or a bridging board to aid sliding transfers between two surfaces. The long handholds eliminate the need to bend and stretch to effect the transfer. The Transfer Sheet can also be used in an emergency situation when a patient has fallen on the floor where a hoist is unavailable or inappropriate. Weight tested to 127kg/20 stones.

LOCO-009 (190cm x 100cm) Transfer Sheet

## Deluxe Transfer Sheet

Used in the same way as the Transfer Sheet above, the Deluxe Transfer Sheet incorporates a series of extra handholds which allows for more precise positioning of a patient during a transfer. The extra handholds also increase control during the handling task by enabling staff to maintain correct posture during the transfer.
